Powerpole Frequently Asked Questions

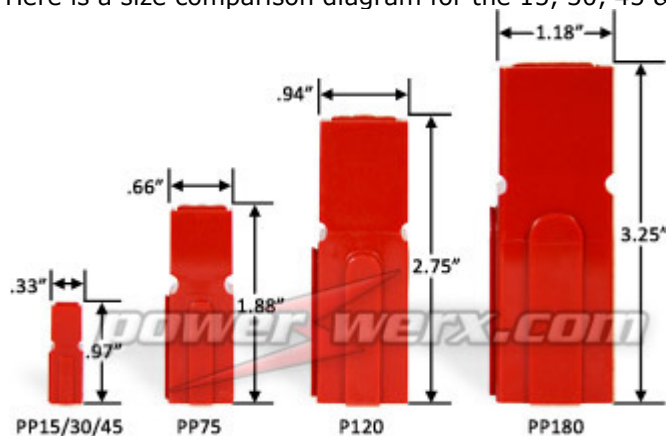

Where are the male and female powerpoles?

Powerpoles are genderless, meaning the supply and load connectors are the same. Since there are no male or female parts, all powerpoles mate with themselves.

Are the 15, 30 & 45 amp Powerpoles interchangeable?

Yes. The 15, 30 & 45 amp contacts all use the same housing. Therefore, they all plug into each other. The only difference between the 15, 30 & 45 amp contacts is the size of the receiving barrel that holds the wire.

Here is a size comparison diagram for the 15, 30, 45 & 75 amp Powerpole Housings

What is the difference between the 15, 30 & 45 amp contacts?

The difference is the size of the receiving barrel that holds the wire.

What is a Powerpole "Set"?

A "Set" includes all parts needed for a single connector. For the 15, 30, 45 & 75 amp powerpoles a set is (1) Red housing, (1) Black housing, (2) contacts and (1) roll pin. For the 50, 175 & 350 amp SB Series sets are (1) colored housing and (2) contacts.

How large are the SB Series powerpoles?

Here is a size comparison diagram for the 50, 120, 175 & 350 amp SB Powerpole Housings.
